POWDER COATING PROCESS

DSI’s aluminum Powder Coating offers an uncompromising quality created by state-of-the-art technology. Our system provides the highest quality powder coating on the market with a lifetime limited warranty giving you peace of mind in your investment.

1. The raw premium-grade aluminum is inspected to be free of blemishes and is not exposed to the outdoor elements.

2. The product enters a heated acidic cleaning stage to remove extrusion debris and fabrication oils.

3-6. Clean: City water rinse
Cleaner: Recycling reverse osmosis water rinse
Cleanest: Pure reverse osmosis water rinse
Sealer: Dried-in-place aluminum sealer

7-8. A 200 MPH air blast removes water drops from the pre-treated aluminum. A convection oven completes the dry-off process.

9. Powder is applied with 18 automated and 2 manual spray guns. Compressed process air is dried to -35°F Dew Point for superior adhesion.

10. The powder coating is then bonded and adhered to the aluminum substrate in a 400 degree cure stage.
