1.0 SCOPE OF EVALUATION

1.1 This Research Report addresses compliance with the following Codes:

- 2018 and 2015 International Building Code® (IBC)
- 2018 and 2015 International Residential Code® (IRC)
- 2017 Florida Building Code (see Section 9.0)

NOTE: This report references 2018 Code sections with [2015] Code sections shown in brackets where they differ.

1.2 PolyRAIL Systems TRX Vinyl Guard System has been evaluated for the following properties

- Structural Performance
- Durability
- Surface Burning
- Decay Resistance
- Termite Resistance

1.3 PolyRAIL Systems TRX Vinyl Guard System has been evaluated for the following uses (see Table 1):

- Guards (aka. guardrails) under the definitions of the referenced codes. They are intended for use at or near the open sides of elevated walking areas of buildings and walkways as required by the referenced codes.

- Guard systems recognized in this report may be used in One- and Two-Family Dwellings regulated by the IRC and all construction types regulated by the IBC in accordance with IBC Sections 705.2.2 and 705.2.3.1 [1406.3], Exceptions 2 and 3. Guards less than 42 inches high are limited to use in One- and Two-Family Dwellings (IRC). See Table 1 for additional restrictions based upon Use and Occupancy Classification.

2.0 STATEMENT OF COMPLIANCE

PolyRAIL Systems TRX Vinyl Guard System complies with the Codes listed in Section 1.1, for the properties stated in Section 1.2 and uses stated in Section 1.3, when installed as described in this report, including the Conditions of Use stated in Section 6.0.

3.0 DESCRIPTION

3.1 Guard systems include a top and bottom rail, with aluminum inserts, vertical balusters, post sleeves, rail-to-post brackets, foot blocks and decorative moldings.

3.2 Rails, post sleeves, foot blocks, balusters and decorative moldings are extruded Polyvinyl Chloride (PVC) produced in a single color: White.

3.3 All top rails are provided with an aluminum insert with a 'T' profile. All bottom rails are provided with an aluminum insert with a 'U' profile. All rail inserts are extrusions of 6063-T6 aluminum. See Figure 2.

3.4 Level guards with heights of up to 42 inches above the floor surface are provided in lengths up to 10 feet as measured from inside-to-inside of supports.

3.5 The top assembly consists of one rail and is attached to each support with a single PVC bracket. The top rail is a 'T' profile and is 1.75 inches high by 3.25 inches wide. See Figure 1.
3.6 The bottom assembly consists of one rail and is attached to each support with a single PVC bracket. The bottom rail is 1.75 inches square. See Figure 1.

3.7 Balusters are 1.375 inches square extruded PVC or 3/4-inch round aluminum. The balusters are placed through routed openings in both the top and bottom rails. See Figure 4.

3.8 The baluster spacing resulting from assemblies recognized in this report shall provide spacing such that a 4-inch diameter sphere cannot pass through any opening between balusters.

3.9 Post sleeves are 4 inches square and have a wall thickness of 0.13 inch.

3.10 The 4x4 inch support post is a 3-5/8-inch square shaped tube with a .060-inch wall constructed of 6005-T5 extruded aluminum containing eight internal screw slots. The post is fastened to 1 of two 5-1/2 inch aluminum base plates.

3.11 The 1/2-inch-thick 6061 – T6 aluminum base plate is attached to the support post with eight 5/16-18 by 2-1/2-inch stainless steel screws and is approved for use in IBC and IRC installations. See Figure 8.

3.12 The 1/4-inch-thick 6063-T6 aluminum base plate is attached to the support post with four 5/16-18 by 2-1/2-inch stainless steel screws and is approved in IRC installations only.

4.0 PERFORMANCE CHARACTERISTICS

4.1 The guard systems described in this report have demonstrated the capacity to resist the design loadings specified in Chapter 16 of the IBC & FBC and Section R301 of the IRC & FRC when tested in accordance with ICC-ES AC174.

4.2 Structural performance has been demonstrated for a temperature range from -20°F to 125°F.

4.3 Materials used are deemed equivalent to preservative treated or naturally durable wood for resistance to weathering effects, decay, and attack from termites.

4.4 PVC materials used have a flame spread index not exceeding 200 when tested according to ASTM E 84.

5.0 INSTALLATION

5.1 PolyRAIL Systems TRX Vinyl Guard System must be installed in accordance with the manufacturer’s published installation instructions, the applicable Code, and this Research Report. A copy of the manufacturer’s instructions must be available on the jobsite during installation.

5.2 The top and bottom rail assemblies are attached to PVC sleeved conventional wood posts or other supporting structure with a mounting bracket. See Figure 3.

5.2.1 One mounting bracket attaches to each end of the upper rail using two (2) #8 by 0.75-inch, self-drilling, pan-head screws. The brackets are attached to the supports using two (2) #12 by 1.25-inch, thread-cutting, Type 17, pan-head screws.

5.2.2 One mounting bracket attaches to each end of the lower rail using two (2) #8 by 0.75-inch, self-drilling, pan-head screws. The brackets are attached to the supports using four (4) #12 by 1.25-inch, thread-cutting, Type 17, pan-head screws.

5.3 The PolyRAIL Systems TRX Vinyl Guard System uses a PVC 1-3/8-inch square picket. See Figure 4. The PolyRAIL Systems TRX B-Series Vinyl Guard System uses a round aluminum picket 3/4-inch diameter See Figure 4. The baluster sections are attached to the HDPE block using two (2) #8 by 0.75-inch self-drilling screws.

5.4 Foot blocks are intermediate bottom rail supports and are installed between the deck surface and the rail at the mid-point of the rail and consist of a 2.0-inch section of baluster and a 1.312 inch by 0.625-inch HDPE block. The HDPE block is attached to the bottom rail utilizing two (2) #12 by 1.25-inch thread cutting screws. The baluster section is attached to the HDPE block utilizing two (2) #8 by 0.75-inch self-drilling screws.

5.5 The 4 x 4 post mounts utilize 2 leveling plates under the baseplate along with four adjustable bolts through the baseplate. The leveling plates are secured by the baseplate mounting hardware passing through holes in
5.6 The wood in the supporting structure including support posts shall have a specific gravity of 0.50 or greater (Southern Yellow Pine or better) and a minimum thickness to allow full penetration of the bracket mounting screws.

6.0 CONDITIONS OF USE

6.1 Installation must comply with this Research Report, the manufacturer’s published installation instructions, and the applicable Code. In the event of a conflict, this report governs.

6.2 Guard systems recognized in this report may be used in One- and Two-Family Dwellings regulated by the IRC, FBC residential, and all construction types regulated by the IBC and FBC in accordance with IBC and FBC Section 1406.3, Exception 2. See Table 1 for additional restrictions based upon Use and Occupancy classification.

6.3 Conventional wood supports including support posts for guards are not within the scope of this report and are subject to evaluation and approval by the building official. Supports must satisfy the design load requirements specified in Chapter 16 of the IBC & FBC and Section R301 of the IRC & FRC and must provide suitable material for anchorage of the rail brackets (See 5.6 under "Installation"). Where required by the building official, engineering calculations and details prepared by a licensed design professional shall be provided.

6.4 Anchorage of the 4x4 post mount is not within the scope of this report and is subject to evaluation and approval by the building official. Anchors must satisfy the load requirements of Chapter 16 of the building code and must meet the following minimum requirements:

6.4.1 A minimum of four anchor bolts with a minimum diameter of 3/8 inch must be used and located in the four pre-drilled holes in the post mount base plate.

6.4.2 When the supporting structure is a wood framed deck, installation must include anchorage to a suitable structural framing. Decking is not considered structural framing, and anchorage to decking alone is not an approved installation method.

6.4.3 For post installation on concrete or other rigid supports (such as structural steel), the installation uses four 3/8-inch diameter anchor bolts located in the pre-drilled holes in the structural post base plate. The type and length of the anchor bolts is dependent upon the material and condition of the supporting structure and is not within the scope of this report.

6.4.4 Where required by the building official, engineering calculations shall verify that the anchorage and supporting structure complies with the building code for the type and condition of the supporting construction.

6.5 All aluminum components in contact with wood shall be factory painted or given a heavy coat of alkali-resistant bituminous paint to provide barrier protection from moisture absorbed in wood Compatibility of fasteners with the supporting structure, including chemically treated wood, is not within the scope of this report.

6.6 The PolyRAIL Systems TRX Vinyl Guard System is manufactured under a quality control program with inspections by Intertek Testing Services NA, Inc.

7.0 SUPPORTING EVIDENCE

7.1 Drawings and installation instructions submitted by the manufacturer.

7.2 The reports of testing and engineering analysis demonstrating compliance with the performance requirements of ICC-ES AC174 “Acceptance Criteria for Deck Board Span Ratings and Guardrail Systems (Guards and Handrails)”, revised December 2014.

7.3 The reports of testing and engineering analysis demonstrating compliance with the performance requirements ASTM D 7032-14 [10a], Standard Specification for Establishing Performance Ratings for Wood-Plastic Composite Deck Boards and Guardrail Systems (Guards or Handrails).

7.4 Documentation of an Intertek approved quality control system for the manufacturing of products recognized in this report.
8.0 IDENTIFICATION

The PolyRAIL Systems TRX Vinyl Guard System is identified with the manufacturer’s name (Digger Specialties, Inc.), address and telephone number, the product name (PolyRAIL Systems TRX Vinyl Guard System), the statements “ASTM D7032 Compliant” and where applicable, “For Use in One- and Two- Family Dwellings Only”, the Intertek Mark as shown below, and the Code Compliance Research Report number (CCRR-0147).

9.0 FLORIDA BUILDING CODE

9.1 Scope of Evaluation:

9.2 Conclusion:

The PolyRAIL Systems TRX Vinyl Guard System described in Sections 2.0 through 7.0 of this Research Report, comply with the 2017 Florida Building Code – Building, Florida Building Code – Residential and Florida Building Code – Energy, subject to the following conditions:

• Use of the PolyRAIL Systems TRX Vinyl Guard System for compliance with the High-Velocity Hurricane Zone provisions of the 2017 Florida Building Code – Building and the Florida Building Code – Residential has not been evaluated and is outside the scope of this Research Report.

• Intertek is a Florida state product evaluation entity.

10.0 CODE COMPLIANCE RESEARCH REPORT USE

10.1 Approval of building products and/or materials can only be granted by a building official having legal authority in the specific jurisdiction where approval is sought.

10.2 Code Compliance Research Reports shall not be used in any manner that implies an endorsement of the product by Intertek.

10.3 Reference to the https://bpdirectory.intertek.com is recommended to ascertain the current version and status of this report.
